Chapter 1

Class Documentation

1.1 cw1 Class Reference

Public Member Functions

- [cw1](#) (ros::NodeHandle nh)
constructor
- bool [t1_callback](#) (cw1_world_spawner::Task1Service::Request &request, cw1_world_spawner::Task1Service::Response &response)
function to solve tasks 1
- bool [t2_callback](#) (cw1_world_spawner::Task2Service::Request &request, cw1_world_spawner::Task2Service::Response &response)
function to solve tasks 2
- bool [t3_callback](#) (cw1_world_spawner::Task3Service::Request &request, cw1_world_spawner::Task3Service::Response &response)
function to solve tasks 2
- void [pcCallback](#) (const sensor_msgs::PointCloud2ConstPtr &cloud_input_msg)
the callback function for receiving the point cloud function
- bool [moveArm](#) (geometry_msgs::Pose target_pose)
move the robot arm to target pose
- bool [moveGripper](#) (float width)
move the gripper to a certain width
- bool [pick](#) (geometry_msgs::Point position)
pickup the cube in certain position
- bool [place](#) (geometry_msgs::Point position)
place the cube into a basket in certain position
- bool [armGo](#) (geometry_msgs::Point position)
move arm to a specific position
- int [getNearestPoint](#) (const PointC &cloud, const pcl::PointXYZRGBA &position)
get the nearest point's index from the cloud and target position
- void [pubFilteredPCMsg](#) (ros::Publisher &pc_pub, PointC &pc)
publish the point cloud message using specific publisher
- void [applyPT](#) (PointCPtr &in_cloud_ptr, PointCPtr *out_cloud_ptr)
apply a PT filter to the input point cloud
- void [findCenter](#) (PointCPtr &in_cloud_ptr, geometry_msgs::PointStamped *pose_out)
find the center of the input point cloud

- int [findColor](#) (const PointC &cloud, const geometry_msgs::PointStamped &loc, bool move_arm=true, int cloud_num_thresh=2000)
find the color of the a position in the given point cloud
- int [searchCubesTask3](#) ()
search all the cubes and store their locs and colors
- int [searchBasketsTask3](#) ()
search all the baskets and store their locs and colors
- bool [pickPlaceCubes](#) (int n_cube, int n_basket)
pick and place all the cubes accroding to the searching results

Public Attributes

- ros::NodeHandle [nh_](#)
- ros::ServiceServer [t1_service_](#)
node handle
- ros::ServiceServer [t2_service_](#)
service of task1
- ros::ServiceServer [t3_service_](#)
service of task2
- moveit::planning_interface::MoveGroupInterface [arm_group_](#) {"panda_arm"}
service of task3
- moveit::planning_interface::MoveGroupInterface [hand_group_](#) {"hand"}
arm group ("panda_arm") in moveit
- float [gripper_open_](#) = 80e-3
arm group ("hand") in moveit
- float [gripper_closed_](#) = 0.0
safe value for the open size of gripper
- double [angle_offset_](#) = 3.14159 / 4.0
safe value for the closed size of gripper
- double [z_offset_](#) = 0.125
angle offset for grasping orentation
- double [approach_distance_](#) = 0.1
z-axis offset for the grasping pose
- std::string [fram_id_](#)
the pre-grasping distance
- pcl::PCLPointCloud2 [pcl_pc_](#)
frame id for the recevied cloud
- PointCPtr [cloud_ptr_](#)
point cloud data in PCL
- tf::TransformListener [listener_](#)
point cloud data pointer
- ros::Publisher [pub_cloud_](#)
TF listener.
- ros::Publisher [pub_seg_](#)
for publishing the filtered cloud
- pcl::PassThrough< PointT > [pt_](#)
for publishing the seg of the first cube
- PointCPtr [cloud_filtered_](#)
Pass Through filter.
- geometry_msgs::PointStamped [pose_color](#)

- filtered cloud pointer*
- geometry_msgs::Point [basket_locs](#) [4]
the pose of the seg to be found the center
- geometry_msgs::Point [cube_locs](#) [100]
store the locations of all the baskets
- int [basket_colors](#) [4]
store the locations of all the cubes
- int [cube_colors](#) [100]
store the colors of all the baskets

1.1.1 Member Function Documentation

1.1.1.1 applyPT()

```
void cwl::applyPT (
    PointCPtr & in_cloud_ptr,
    PointCPtr * out_cloud_ptr )
```

apply a PT filter to the input point cloud

Parameters

<i>in_cloud_ptr</i>	input point cloud to be filtered
<i>out_cloud_ptr</i>	output point cloud pointer

1.1.1.2 armGo()

```
bool cwl::armGo (
    geometry_msgs::Point position )
```

move arm to a specific position

Parameters

<i>position</i>	the target position of the arm
-----------------	--------------------------------

Returns

true if successful

1.1.1.3 findCenter()

```
void cw1::findCenter (
    PointCPtr & in_cloud_ptr,
    geometry_msgs::PointStamped * pose_out )
```

find the center of the input point cloud

Parameters

<i>in_cloud_ptr</i>	input cloud message from color frame
<i>pose_out</i>	ouput pose pointer

1.1.1.4 findColor()

```
int cw1::findColor (
    const PointC & cloud,
    const geometry_msgs::PointStamped & loc,
    bool move_arm = true,
    int cloud_num_thresh = 2000 )
```

find the color of the a position in the given point cloud

Parameters

<i>cloud</i>	input cloud
<i>loc</i>	position to be searched
<i>move_arm</i>	if ture, move arm above the loc to calculate the more accurate color
<i>cloud_num_thresh</i>	the threshold to judge a cloud is empty or not

Returns

the color (1 for red, 2 for blue, 3 for pink, 4 for empty and -1 for error)

1.1.1.5 getNearestPoint()

```
int cw1::getNearestPoint (
    const PointC & cloud,
    const pcl::PointXYZRGBA & position )
```

get the nearset point's index from the cloud and target position

Parameters

<i>cloud</i>	the point cloud data
<i>position</i>	the target position to be searched

Returns

the index of the nearest point

1.1.1.6 moveArm()

```
bool cw1::moveArm (
    geometry_msgs::Pose target_pose )
```

move the robot arm to target pose

Parameters

<i>target_pose</i>	the target pose
--------------------	-----------------

Returns

true if successful

1.1.1.7 moveGripper()

```
bool cw1::moveGripper (
    float width )
```

move the gripper to a certain width

Parameters

<i>width</i>	the width of the gripper
--------------	--------------------------

Returns

true if successful

1.1.1.8 pcCallBack()

```
void cw1::pcCallBack (
    const sensor_msgs::PointCloud2ConstPtr & cloud_input_msg )
```

the callback function for receiving the point cloud function

Parameters

<i>cloud_input_msg</i>	input cloud message from color frame
------------------------	--------------------------------------

1.1.1.9 pick()

```
bool cw1::pick (
    geometry_msgs::Point position )
```

pickup the cube in certain position

Parameters

<i>position</i>	the position of cube to be picked up
-----------------	--------------------------------------

Returns

true if sucessful

1.1.1.10 pickPlaceCubes()

```
bool cw1::pickPlaceCubes (
    int n_cube,
    int n_basket )
```

pick and place all the cubes accroding to the searching results

Parameters

<i>n_cube</i>	the number of cubes
<i>n_basket</i>	the number of baskets

Returns

true if sucessful

1.1.1.11 place()

```
bool cw1::place (
    geometry_msgs::Point position )
```

place the cube into a basket in certain position

Parameters

<i>position</i>	the position of the basket
-----------------	----------------------------

Returns

true if successful

1.1.1.12 pubFilteredPCMsg()

```
void cw1::pubFilteredPCMsg (
    ros::Publisher & pc_pub,
    PointC & pc )
```

publish the point cloud message using specific publisher

Parameters

<i>pc_pub</i>	the point cloud publisher
<i>pc</i>	the point cloud

1.1.1.13 searchBasketsTask3()

```
int cw1::searchBasketsTask3 ( )
```

search all the baskets and store their locs and colors

Returns

the number of baskets

1.1.1.14 searchCubesTask3()

```
int cw1::searchCubesTask3 ( )
```

search all the cubes and store their locs and colors

Returns

the number of cubes (boxes)
